

Trial of *net-runna Enterprise* at a global aerospace group reveals phenomenal results

The launch of *net-runna Enterprise v3.9* is revolutionising the way companies maintain their IT infrastructures as one global aerospace group has recently discovered.

Issue

- Increasing mobile workforce of international travellers
- Laptops frequently crossing time zones
- Swapping networks and accessing different web based applications
- High total cost of ownership (TCO) per laptop
- 1 day timescale to build and issue new machine to client
- Two week repair, rebuild and re-issue turnaround time for any machine failure

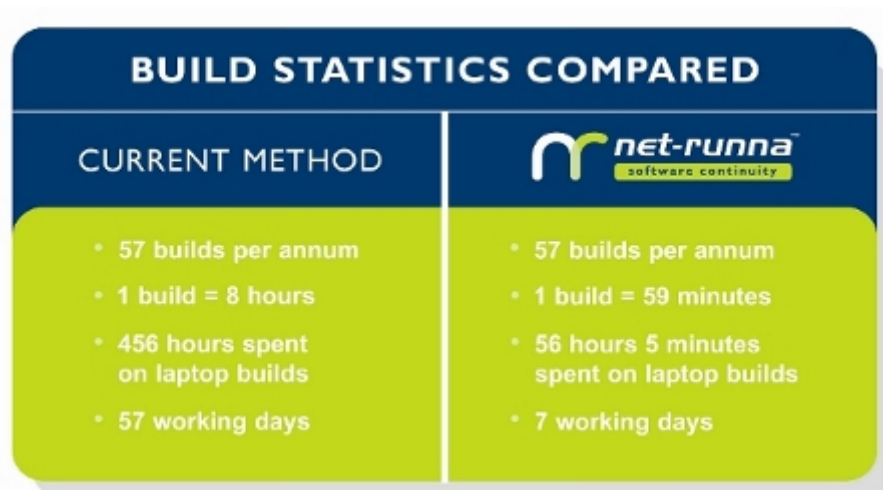

Need

- Quicker and easier method to build and repair laptops
- Reduction in TCO

Solution

- Introduction of a technology to meet the need

The client's IT team researched alternative solutions - as part of this process an evaluation of the *net-runna* technology was undertaken. The following results were observed:

Conclusion

An analysis of the trial results reveal that build and deploy time savings alone lead to a return on investment in as little as two months! Add self-healing and the consequent reductions in support time into the equation and the decision to adopt *net-runna* is a no brainer!
